PROFILE SUMMARY

Motivated Computing Science graduate with a strong foundation in full-stack web development and hands-on experience in building scalable web applications. Proficient in the MERN stack (MongoDB, Express.js, React, Node.js), SQL databases, RESTful API development, authentication systems, and cloud deployment. Eager to contribute technical expertise and grow within an entry-level software development role.

CORE SKILLS

Technical Skills: JavaScript, React.js, Node.js, Express, MongoDB, MySQL, HTML, CSS, Python, RESTful APIs, Git, AWS, UI/UX Principles

Soft Skills: Problem-solving, Communication, Teamwork, Adaptability, Organized, Time Management

EDUCATION

- ❖ **Bachelor of Science with Honors in Computing Science** | PSB Academy – Coventry University, UK | 2024 – 2026
- ❖ **Level 4 Diploma in Computing** | NVL College – NCC Education, UK | 2023 – 2024

PROJECTS

Full-Stack E-Commerce Platform | *Personal Project* | Nov 2025

- Developed a full-stack e-commerce web application using the **MERN stack** (MongoDB, Express, React, Node.js) with three separate repositories covering the client frontend, admin frontend, and backend server
- Implemented core e-commerce functionalities including product listings, order processing, and payment handling
- Built a dedicated **admin panel** with full CRUD capabilities for managing products, users, and other platform data
- Integrated **JWT** for authentication, **Bcrypt** for password encryption, and **Supabase** for cloud image storage
- Deployed client and admin frontends on **Vercel** and the backend server on **Render**

RASH-BoxWise — Reservation & Allocation System for Self-Storage Hub | *Academic Project* | Mar 2026

- Built a full-stack self-storage reservation and allocation system using the **SERN stack** (MySQL, Express, React, Node.js) with separate repositories for client frontend, admin frontend, and backend server
- Implemented a complete reservation flow including unit availability display by type, user data collection, and admin payment confirmation
- Enabled customers to track allocations and submit requests (early return, cancellation, lease renewal); admins can manage units, approve/reject requests, and confirm payments
- Developed an **interactive facility map** providing real-time visual insight into booked and available storage units
- Integrated **Sequelize** ORM, **JWT**, **Bcrypt**, **node-cron** for scheduled tasks, and **Nodemailer/Mailgen** for automated email notifications
- Hosted MySQL database on **AWS Aurora & RDS** for scalable and managed cloud storage
- [Live Demo](#)
